

CASE STUDY: Professional Electrical Contractors

CASE STUDY: PROFESSIONAL ELECTRICAL CONTRACTORS

Executive Summary

Professional Electrical Contractors (PEC) is an electrical contracting company that works on a variety of commercial and residential projects. With the help of eVolve Electrical, Professional Electrical Company has enhanced their prefabrication process which makes them stand out from the competition.

Here are a few results:

- 100's of hours were saved through the use of eVolve Electrical's pre-built content library.
- PEC is finishing projects 2-4 weeks faster.
- PEC started experiencing a positive impact quickly due to eVolve MEP's great customer service and implementation process.

The Challenge

Before making the move to eVolve MEP, PEC did not have access to a diverse library of electrical content. They were frustrated because they had to spend 100's of hours manually building families from scratch or they were forced to "scour the internet looking for the right part."

According to the VDC Manager at Professional Electrical Contractors, "Without eVolve MEP, PEC is not as efficient." Time spent on building custom content was limiting their ability to take on more projects. PEC was also unsatisfied with their current collaboration methods and sought a better option.

"Before eVolve Electrical, there was no diverse library of parts. If there was something you needed, you had to build it yourself or scour the internet for it. Without eVolve we couldn't be as efficient."

"I have not seen service as good as with any other software company."

The Opportunity

In order to combat the challenges of efficiency when using a limited library of parts, PEC turned to eVolve Electrical. The 100's of prebuilt parts in eVolve Electrical provided an opportunity for PEC to boost efficiency and productivity while the platform offered a way to improve collaboration. In addition to valuable content features, PEC also found that eVolve MEP's exceptional customer service guaranteed a smooth implementation period. According to their VDC Manager, they had "not seen service as good with any other software company."

The Result

Now that PEC has implemented eVolve Electrical, their VDC Manager said his department is saving 100's of hours that were previously spent drawing parts. PEC is now able to finish and design projects 2 to 4 weeks faster than before.

Not only is PEC able to function more efficiently, it has also been able increase the number of projects taken on due to finishing existing projects early. "eVolve Electrical helps us keep the projects on schedule. We are able to optimize the time we have in order to stay on schedule which then allows us to take on more projects."

"eVolve Electrical helps us keep the projects on schedule. We are able to optimize the time we have in order to stay on schedule which then allows us to take on more projects."
